DETAILED ACTION

Claim Objections

1. Claim 3 is objected to because of the following informalities:

Claim 3 language is identical to claim 2 language, and the dependency of claim 3 is the same as the dependency of claim 2; therefore, claim 3 is identical to claim 2. Claim 3 should be deleted. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Allen (U.S. Patent No. 6,658,625 B1).

As to claim 1, Allen discloses an information extraction device for extracting information corresponding to a request from a database, comprising:

a function called up from application software, for converting a plurality of kinds of requests into requests in an XML format by referring to a database and returning results (See column 14, lines 33-51, and see column 33, lines 37-57, also see column 2,

lines 3-42, prior art).

As to claims 2, and 3, Allen discloses wherein a list of requests related to the generated requests in an XML format that can be arbitrarily selected and set, is linked and provided (See column 6, lines 16-67, and see column 8, lines 10-47).

As to claim 4, Allen discloses a computer-readable storage medium on which is recorded a program for extracting information corresponding to a request from a database as an information extraction device and converting a plurality of kinds of requests into requests in an XML format by referring to a database as a function called up from application software (See column 14, lines 33-51, and see column 33, lines 37-57, also see column 2, lines 3-42, prior art).
